I believe that traffic & weather effects all people, no matter if you listen to AM, FM, Sirius, or XM radio. Therefore all radio stations that have this capability & want to help with traffic & weather should be allowed. When traffic & weather only effects those individuals that listen to AM or FM, & no one else, than & only than, should it be regulated to AM & FM customers. I listen to xm radio while delivering freight & this feature helps tremendously, so I can better plan my route & avoid costly expenses (fuel, lost time, delaying freight). If AM & FM are so affraid of losing listeners to this type of programing, than maybe they should listen to why these customers went to satelitte radio in the first place. Maybe AM & FM should try a better format to try & retain listeners & recruit more listeners.
